

# 3D Letters

*How can I draw letters with depth?*

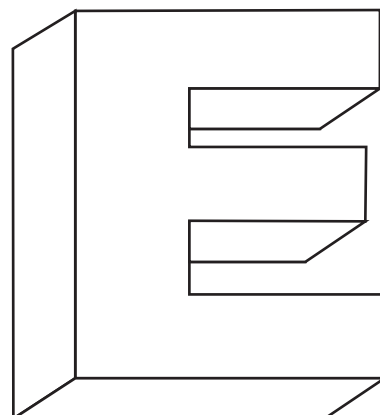

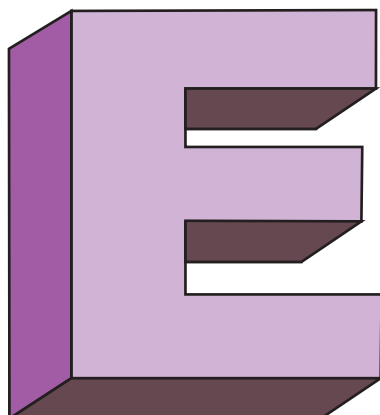

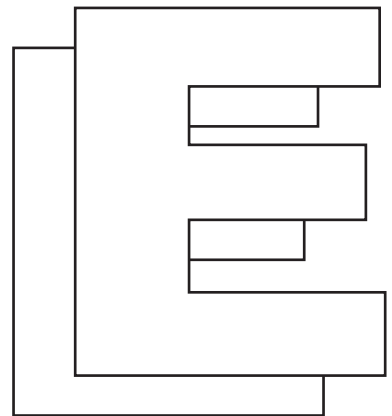

**1.** Duplicate the same OUTLINE of the letter with the same measures but MOVING it from its former position.

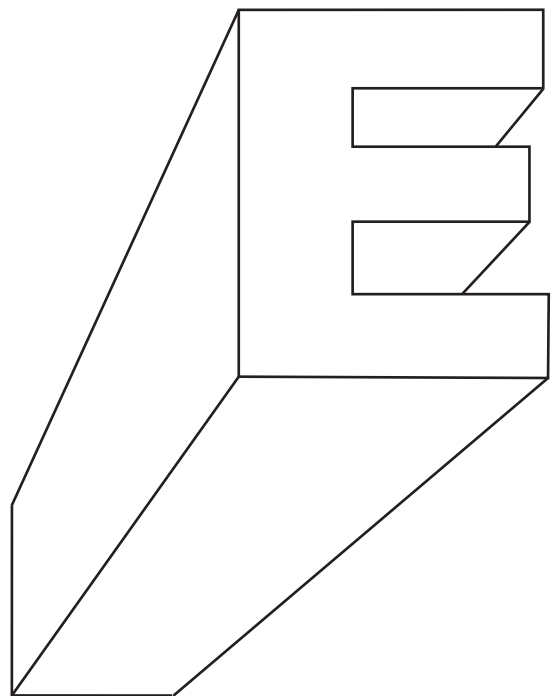

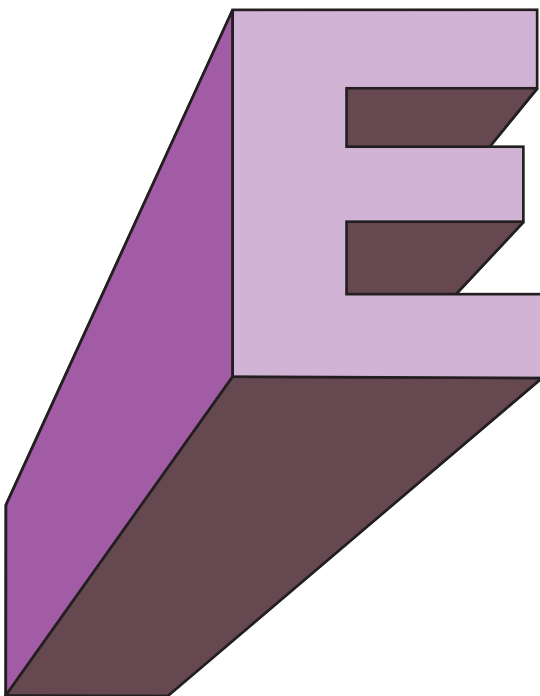

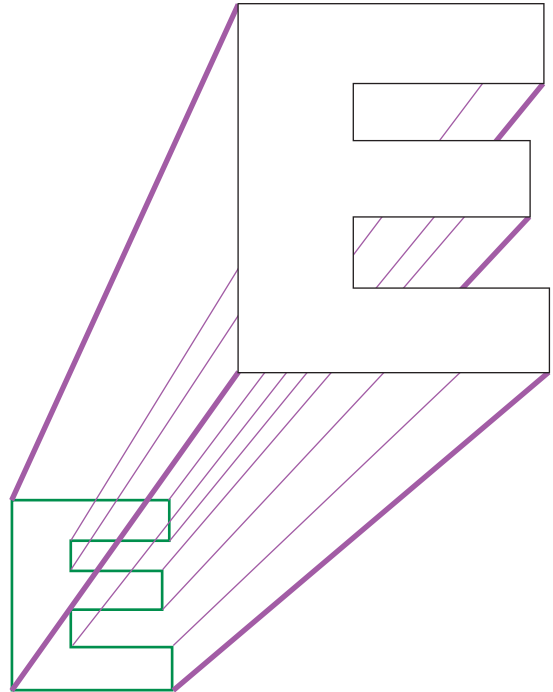

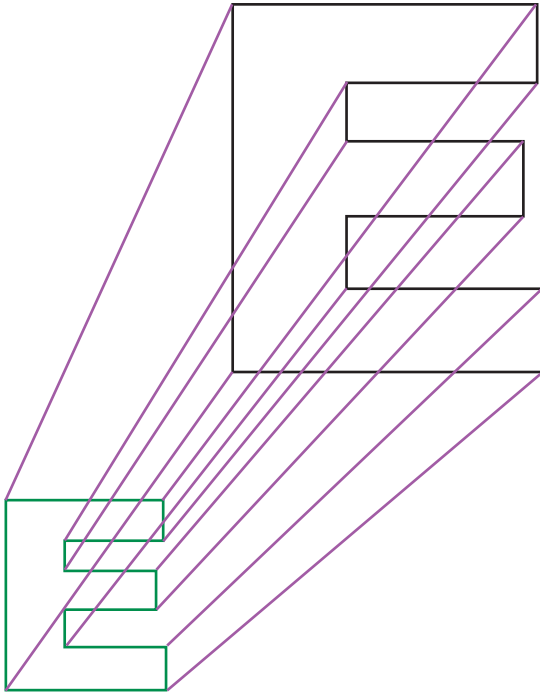

**2.** Erase all the lines that are HIDDEN by the OUTLINE that is over.

**3.** Join the corresponding VERTEXES.

**4.** Finally, we can paint the letter.

We can also duplicate the **OUTLINE** of the letter far from its former position and different size so we can **EMPHASIZE** its **DEPTH**.
